

I am FOR opening up of the unlicensed band for wireless uses. I am constantly finding it more and more difficult to find uncluttered bandwidth. This unlicensed band has allowed me to compete against the largest incumbents with relative ease. This is the ultimate American dream. We rarely get approved for loans or grants because we are seen as a high-risk business. Please give us a small grant by allowing us to have more bandwidth.

My goal is to create a carrier class network allowing for Video, data, and voice. To do this, I must lower the number of users on each channel.

Thank you for your time and consideration.
